projects

ramblr
source

A yelp-like single-page application. It was designed with a more minimal aesthetic. Backbone consumes a RESTful Rails API. There is a categorical autocomplete and search using custom routes. Uses polymorphic associations. The API is optimized with eager loading, russian doll caching, and counter caching. Code is DRY'd up using concerns and scopes.

cloneddit
source

A clone of reddit as an attempt to rewrite as much as possible from scratch. Rewrote ActiveRecord and ActiveResource. Handles a similiar route DSL. Manages sessions and flashes through WEBrick's cookie interface.

skills

Ruby, Ruby on Rails, Javascript, jQuery, Backbone.js, SQL, RSpec, git, subversion, HTML, CSS, perl, Linux

employment

February 2013 - May 2014

Software Engineer Barracuda Networks

· maintained and rewrote install scripts for Barracuda's Linux (custom and CentOS) for all hardware appliances

· created a client/server system for profiling lifespans of SSDs

· handled support cases for hardware and OS level issues

· used agile development methods

July 2012 - February 2013

Software Engineering Intern Barracuda Networks

· wrote initramfs scripts to automatically repartition and format additional disk space added to VM's

· maintained build system to convert hardware appliances to VM's (VMWare, Hyper-V, Xen, VirtualBox) for all of Barracuda's VM products

January 2011 - March 2012

Production Roaster Barefoot Coffee

education

August 2014   App Academy

2010 - 2013   De Anza Community College
